

GET OUT FROM BEHIND THE COUNTER AND SERVE YOUR CUSTOMERS WHERE THEY ARE

Skip the notepad and the trek to the wait station and send your customers' orders directly to the kitchen from the table. Servers that use a mobile POS tablet are able to spend more time with their customers and attend to their needs because they aren't constantly returning to a terminal across the room to enter orders. This boosts both sales and tips which is good for everyone.

Tablets aren't just for table service restaurants; many quick service restaurants use tablets to improve the speed of service both in the drive thru line and in front of the counter inside. If your customers are experiencing long lines at your restaurant, mobile POS tablets could be the solution.

- » **Spend more time at the table and less time off the floor away from customers**
- » **Pay at the table with EMV chip cards**
- » **Reduce wait times**
- » **Lines moving faster means more sales**
- » **Line bust the front counter and even drive-thru** – Line busting enables the kitchen to start working on orders faster, which improves throughput and your guest experience.
- » **Different sizes and solutions available** including iPad, Android, and Windows tablets.
